May 2021

Building Passport Service

Overview

The aim of the Building Passport Service is to provide a central point of truth for building safety data in the UK. The Service would be used to gather and store different building safety surveys so the safety status of individual buildings could be determined by a range of end-users (Central Government, Councils, Building Owners or Agents, Surveyors and possibly members of the public).

Key features:

Golden thread

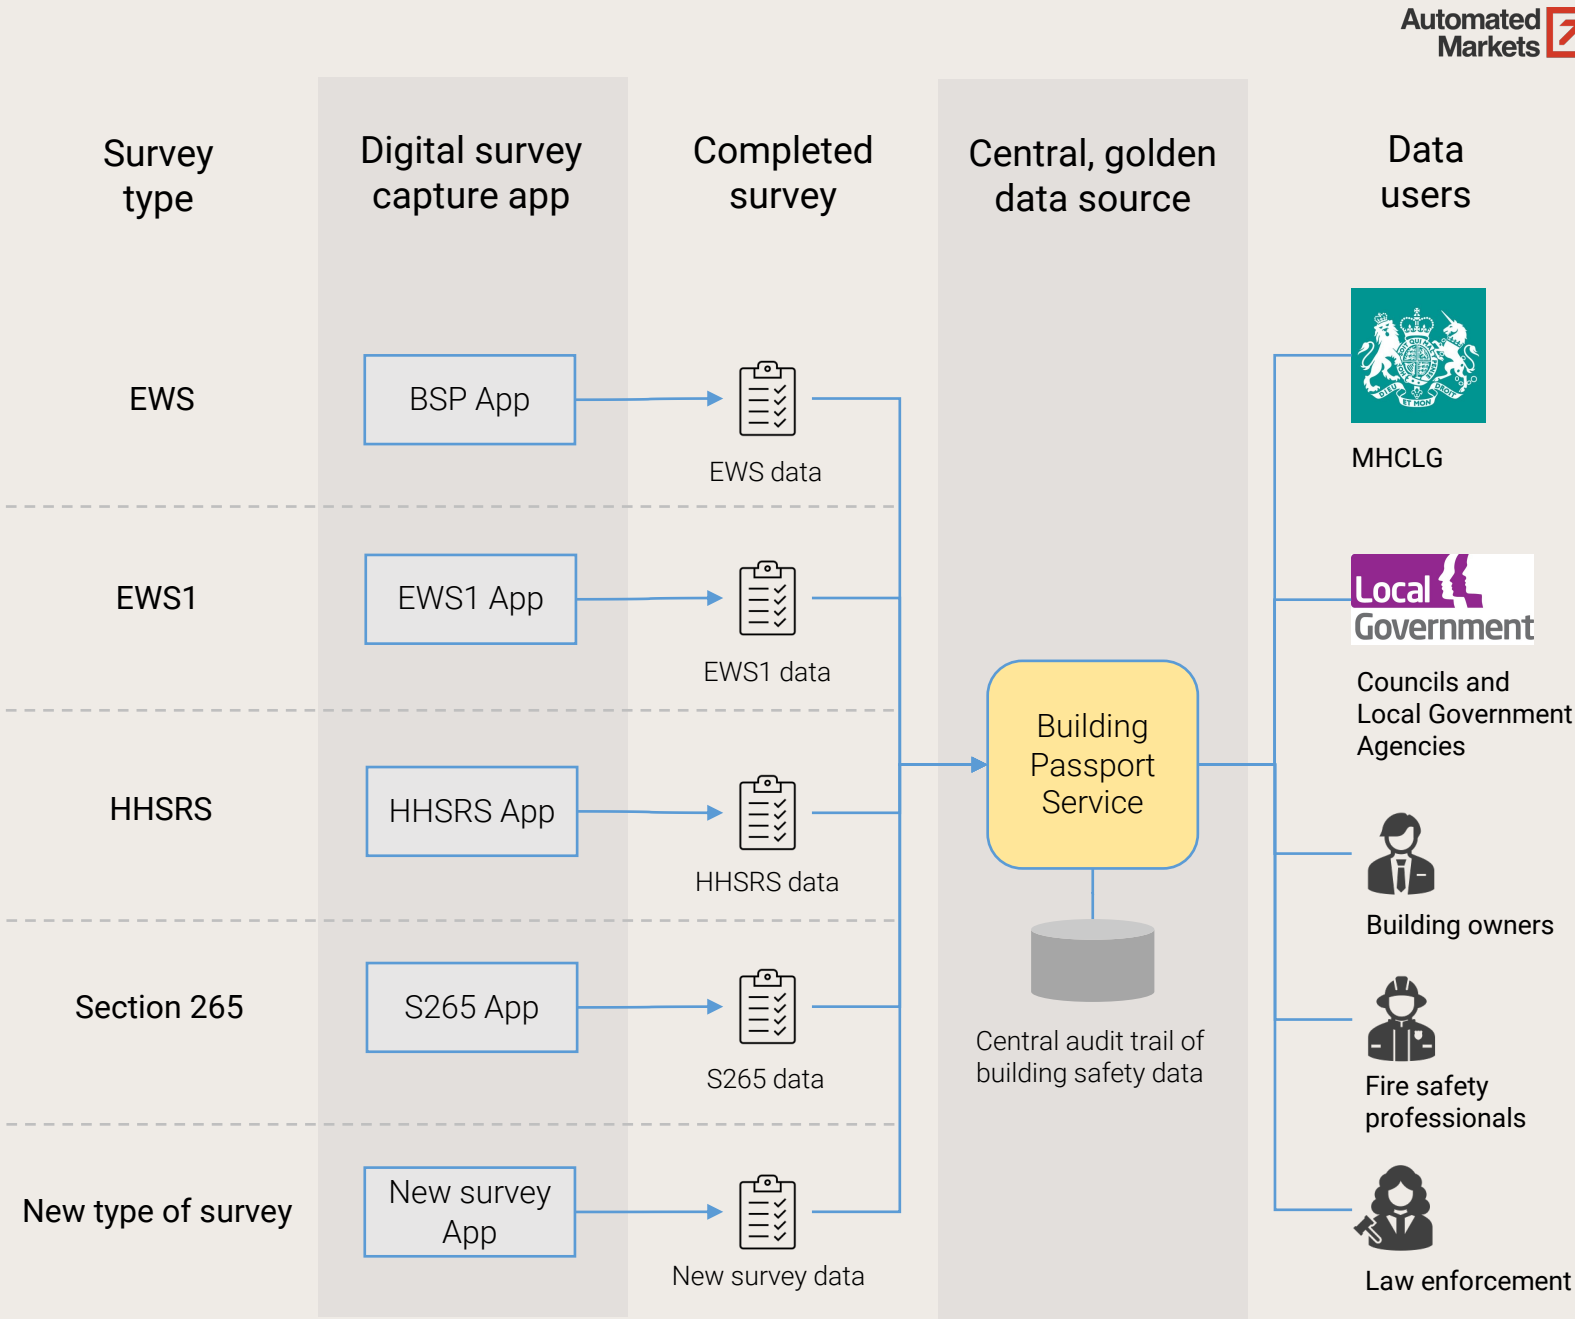

Verifiable provenance for each survey stored by the Building Passport Service.

Digital first

Supports digitisation of Local and Central Government by integrating with existing digital systems and yet-to-be created applications, such as the Building Safety Platform being developed by Southwark Council to gather EWS responses from Building Owners and Agents.

Extensible

As new types of building safety surveys are required, by need or legislation, the Building Passport Service can be adapted to capture and track them.
